

SYSTEM: LINC(D) Cognitive Graph Schema

ROOT_NODE:

LINC(D)

ROOT_DESCRIPTION:

Persistent cognitive operating system for maintaining continuity of memory, context, goals, identity, and behavioral interpretation across time.

NODE_CLASSES

SYSTEM_NODE

Definition:

Structural components of the operating system.

Examples:

- Experience Layer
- Orchestration Layer
- Context Kernel
- Memory System
- Knowledge Graph
- Tool Layer
- AI Roundtable
- Fractalnomia
- Simple Minds Studios
- Bartica Dashboard

Properties:

- name
- purpose
- priority
- dependencies
- status
- version

MEMORY_NODE

Definition:

Stored cognitive information.

Subtypes:

WorkingMemory

EpisodicMemory

SemanticMemory

ProceduralMemory

Properties:

timestamp

importance

confidence

source

recurrence

relevance_score

IDENTITY_NODE

Definition:

Persistent characteristics and preferences.

Examples:

personal values

creative preferences

behavior patterns

goals

long-term interests

Properties:

stability
confidence
change_rate
history

PROJECT_NODE

Definition:

Active systems or initiatives.

Examples:

Linc(d)
Bartica Dashboard
Simple Minds Studios
Fractalnomia
RobotOS
Codex Bartica

Properties:

status
completion_percent
dependencies
priority
complexity

PERSON_NODE

Definition:

Individuals connected to system context.

Examples:

self

family
friends
collaborators
pets

Properties:

relationship_type
importance
interaction_frequency

EVENT_NODE

Definition:

Events occurring across time.

Examples:

conversation
trip
decision
milestone
project completion

Properties:

date
duration
emotional_weight
impact_score

COGNITIVE_STATE_NODE

Definition:

Current interpreted operating state.

States:

Exploratory

Execution

Fragmentation

Reflective

Drift

Properties:

confidence

duration

severity

transition_probability

EDGE_TYPES

ALLOWED_RELATIONSHIPS

PERSON_NODE

→ influences IDENTITY_NODE

EVENT_NODE

→ updates MEMORY_NODE

MEMORY_NODE

→ reinforces IDENTITY_NODE

IDENTITY_NODE

→ influences GOAL_NODE

GOAL_NODE

→ prioritizes PROJECT_NODE

PROJECT_NODE

→ depends_on SYSTEM_NODE

COGNITIVE_STATE_NODE

→ modifies CONTEXT_KERNEL

CONTEXT_KERNEL

→ updates KNOWLEDGE_GRAPH

TEMPORAL_RULES

Recent events:

weight = high

Repeated events:

weight increases logarithmically

Contradictory events:

decrease confidence

Long-term patterns:

increase stability score

COGNITIVE_LOOP

Perception

Integration

Inference

Adaptation

- VideoScript

==

SYSTEM_GOAL

Transform fragmented activity into evolving structured cognition.
